DESCRIPTION

The GRF2082 is a broadband, linear, ultra-low noise amplifier designed for small cell, wireless infrastructure, and other high-performance RF applications requiring ultra-low noise figure (NF), high gain, and linearity.

The device features an integrated shutdown function which places the device into a high-isolation shutdown state.

This device is a member of a family of pin-compatible, ultra-low noise devices which cover a wide range of frequency bands with industry-leading NF and gain:

[GRF2080](#): 0.01 to 2.2 GHz [GRF2081](#): 0.38 to 2.7 GHz

[GRF2082](#): 0.3 to 3.8 GHz [GRF2083](#): 0.729 to 8.5 GHz

Tape and Reel Information

Guerrilla RF's tape and reel specification complies with Electronic Industries Alliance (EIA) standards for "Embossed Carrier Tape of Surface Mount Components for Automatic Handling" (reference EIA-481). See the following page for the Tape and Reel Specification and Device Package Information table, which includes units per reel.

Devices are loaded with pins down into the carrier pocket with protective cover tape and reeled onto a plastic reel. Each reel is packaged in a cardboard box. There are product labels on the reel, the protective ESD bag and the outside surface of the box.

Revision History

Revision Date	Description of Change
November 8, 2018	Release Ø Data Sheet.
May 4, 2023	Release A Data Sheet. Upgraded Data Sheet to new format.

Data Sheet Classifications

Data Sheet Status	Notes
Advance	S-Parameter and NF data based on EM simulations for the fully packaged device using foundry-supplied transistor S-Parameters. Linearity estimates based on device size, bias condition and experience with related devices.
Preliminary	All data based on limited evaluation board measurements taken within the Guerrilla RF Applications Lab. All parametric values are subject to change pending the collection of additional data.
Release Ø	All data based on measurements taken with <i>production-released</i> material. TYP values are based on a combination of ATE and bench-level measurements, with MIN/MAX limits defined using <i>modelled estimates</i> that account for part-to-part variations and expected process spreads. Although unlikely, future refinements to the TYP/MIN/MAX values may be in order as multiple lots are processed through the factory.
Release A-Z	All data based on measurements taken with production-released material <i>derived from multiple lots which have been fabricated over an extended period of time</i> . MIN/MAX limits may be refined over previous releases as more statistically significant data is collected to account for process spreads.
